

Data Analyst at an e-commerce company, analyzing pricing and inventory data. MPS in Informatics (GPA 3.87), Northeastern University, with 3 years in financial operations before transitioning to analytics. Skilled in SQL, Python, Tableau, Power BI, and Excel. Experienced in AWS-based databases, statistical analysis, and data-driven pricing and reporting. Adept at leveraging A/B Testing and Statistical Modeling to empower global business strategy.

EDUCATION

NORTHEASTERN UNIVERSITY, BOSTON, MA

DEC 2025

Master of Professional Studies in Informatics – Cloud Computing Applications and Management GPA:3.87

Coursework: Database Management, Cloud Analytics, Data Visualization, Network Security, Web Design & Development, Data Analytics

XINJIANG UNIVERSITY OF ECONOMICS AND FINANCE, CHINA

JUN 2020

Bachelor of Economics: International Economics And Trade

Coursework: Econometrics, Statistics, International Finance, Business Data Analysis, E-commerce

SKILLS AND CERTIFICATIONS

- Data Analysis & Visualization: **SQL, Tableau, Power BI, Excel, Data Cleaning/Wrangling, A/B Testing, Dashboard Design, dbt**
- Programming & Tools: **Python, Pandas, Fast API, Looker**
- Databases & Data Processing: **PostgreSQL, MySQL, SQLAlchemy, MongoDB**
- Cloud & DevOps: **AWS (S3, RDS, EC2, Lambda, SageMaker), Docker, GitHub Actions, CI/CD, Git**
- Certifications: **AWS Certified Solutions Architect – Associate (SAA), AWS Certified Cloud Practitioner (CLF)**

PROJECT EXPERIENCE

Independent Data Analysis Projects | Financial & Pricing Case Studies | 2026

[Portfolio](#)

Financial Signal Diagnosis | 14-Year Multi-Company Financial Analysis

Data Analyst – Financial Statement Analysis

Tech Stack: Python, Pandas, Matplotlib, Tableau, GitHub

- Analyzed 14 years of financial data across 7 public companies (Apple, Amazon, Nvidia, McDonald's, AIG, PG&E, Sears) to diagnose where headline growth metrics diverge from underlying cash flow and equity trends.
- Compared Apple and Nvidia margin volatility, isolated a PG&E cash-flow timing artifact, and contrasted McDonald's and Sears equity and buyback strategy.
- Diagnosed AIG's profit-vs-cash divergence and built a diagnostic framework translating each finding into a recommended action.
- Backed every reported metric with one of 10 supporting charts; published as a reproducible GitHub repository with a companion interactive Tableau dashboard.

Meal Delivery Pricing Strategy | Pricing & Promotion Case Study

Data Analyst – Pricing Analytics & Experiment Design

Tech Stack: Python, Pandas, SQL, Matplotlib

- Analyzed 456,548 rows of operational data across 145 weeks, 77 fulfillment centers, and 51 meals to test whether discount strategy should differ by category.
- Found price elasticity varies about 19x across categories (Seafood -3.84 to Extras -0.20), validated against actual revenue impact rather than the coefficient alone.
- Quantified diminishing returns from stacking promotion channels (2.66x combined lift vs. 3.80x predicted by independence) and identified category averages that mask product-level pricing errors.
- Designed an A/B test with a real sample-size feasibility calculation to validate the pricing change before rollout.

WORK EXPERIENCE

ZJW Inc., Ontario, CA

Jun 2026 - Present

E-commerce Data Analyst

- Analyzed e-commerce sales data — revenue trends, sell-through rate, and days-to-sell — across 10 storefronts on Amazon, eBay, and Walmart, identifying platform-level differences in order volume and sales performance to support pricing and inventory decisions.
- Optimize unstructured SKU catalogs using dbt-driven data transformation methodologies to support multi-level product analytics for ~10,000 monthly orders.
- Empower data-driven pricing strategy through Looker and Tableau dashboards, leveraging statistical modeling to flag markdown candidates and grow PC hardware orders to 22% of total volume.
- Built Experiment with conversion rate and average selling price variables to build automated weekly performance reports that streamline inventory planning and data collection workflows.

Xinjiang Construction Company, CHINA | 3 Years

Oct 2020 - Dec 2023

Financial Operations Analyst

- Analyzed daily financial transactions and invoices to ensure data integrity and compliance with internal controls, managing high-variance datasets for employee reimbursements.
- Optimized data auditing workflows by conducting manual reconciliation of 500+ monthly transactions, identifying discrepancies using statistical comparison techniques..
- Collaborated with senior management to prepare month-end closing reports and data visualizations, providing actionable insights into capital flow and resource allocation.
